Assessment average of ①~⑤													
	2												

Initial risk assessment
Based on the results of ③, input "X" for the initial risk.

Final risk assessment
Based on the results of ④, input "Y" for the final risk.

④ Verification of final assessment
Are the countermeasures and actions taken appropriate and has the level of risk been reduced?

YES. Implementation of the proposed countermeasures will reduce the level of risk to a low level.

Vessel A Quay collision accident Accident timeline

Crew arrangement	Standard docking procedures	Time	Speed	Distance from the quay (Ship length ratio)	Actual actions taken	Who
Bridge Master • C/E	Engine in neutral position	11:55	9.4 kts	2,350 m (30 L)	At 2,350m before the quay (30L), engine half speed to neutral operation, Speed of 9.4 knots and switched from automatic to manual rudder	Master
Fore C/Off • Bsn • Sailer	D/Slow Ahead Used				The Master intended to use the joystick device to control the VecTwin Rudder system to manoeuvre the ship to the shore, and switch the rudder control to remote control, D/Slow Ahead	Master
Aft 2/AE • 3/Off	speed control both sternway and headway	12:00	9.0 kts	1,160 m (15 L)	However, he did not realise that the rudder switch was stuck in the non-follow-up position and moved to the port side of the bridge in front of the remote control stand . He believed that it had switched to remote rudder control by only operating the one lever .	Master
Eng. Room 1/AE		12:06	5.0 kts	317 m (4 L)	Distance to the quay was approximately four times the length of the vessel	Master
	D/Slow Ahead				At 100m before the quay, he thought he had tipped the joystick backwards and made a sternway manoeuvre, but in fact it was in neutral (hover) .	Master
	He made a sternway manoeuvre.	12:08	3.1 kts	100 m (1 L)	He was too preoccupied with the distance to the quay that he did not look at the rudder angle indicator on the VecTwin rudders. to notice that the rudders were heading sternway .	Master
	Turned using bow thruster and joystick				As the speed to fetch headway was not decreasing, he tried to make sternway by increasing engine speed (not effective as it was in neutral (hover)) , and anchored.	Master
		12:09	4.3 kts	0 m (0 L)	Collided with the quay at almost a right angle, maintaining a speed of 4.3 knots	Master
